

The Hidden Media Hub is a recessed box used to house AV and power outlets behind wall-mounted flat-screen TV's or other devices and furnishings. It is specially designed so installers can easily hide cables in the wall cavity and provide easy access to all connections. The paintable lid allows the Hidden Media Hub to blend in with existing decor making the hub the ideal solution to hide your cables and equipment. It is the first recessed hub designed for Australian and New Zealand electrical or AV gear that can be mounted in a shallow wall with a minimum depth of 70mm. The Hidden Media Hub is suitable for a range of different applications.
