

TV and Satellite Selector Switch 05MM-SW90

The 05MM-SW90 is an RF selector switch to connect two selectable inputs to an RF network or reversed as an output switch. Switch between sources or outputs by the A and B switches on the top. The switch features high isolation of up to 90dB between ports, making it highly adept at eliminating interference. The SW90 has 'F' type RF ports for easy installation.

Features and Benefits

- » SW90 can switch between different RF sources, including satellite and CATV frequencies
- » High isolation of up to 90dB port to port to eliminate interference from the second source
- » Power passing to allow voltage to pass through for upstream or downstream active devices
- » 'F' type connections for a secure connection

Input	Two 'F' Type Female
Input Impedance	75 Ohms
Output	One 'F' Type Female
Output Impedance	75 Ohms
Isolation	90dB
