

IR Over Coax Kit for 14MM-JM02 Modulator 14MM-JM02-IR

The JM02-IR is an IR over coaxial cable solution for use with the 14MM-JM02 modulator. The IR Kit allows users to remotely control the source device by passing the remote control's IR signal back through the coaxial network, where it is extracted at the modulator and distributed to the source device. Multiple IR kits can be used with a single modulator to enable source control from multiple endpoints.

Features and Benefits

- » Remotely control your modulated sources via the existing coaxial cables, no need to run additional cables
- » Expandable to many locations with additional IR kits
- » No power required when using one or two kits on a small coaxial network
- » USB power is available for larger networks with multiple kits
- » Simple plug-and-play solution
